Özet

With over two years of experience as a Data Analytics Manager at Webhelp, I oversee a team of data analysts in creating and delivering data warehouse structures, data models, management reports, and data platform processes for various internal and external projects. I hold a Microsoft Certified Data Analyst Associate credential, which validates my skills in designing and building scalable data solutions using Microsoft Power BI.

My career journey spans different sectors and fields, where I have developed and advanced my expertise in data analytics. I have successfully contributed to several local and global roles and projects, working with people from 12 different countries and providing data insights for finance, staffing, quality, and development. I have also implemented and integrated Power BI with data warehouse datasets, and managed the global datalake project using Azure DataFactory. My goal is to leverage my knowledge and experience to deliver data-driven solutions that support Webhelp's vision and mission.
